

## IT 330

### Assignment 6

Spring 2016

Due 6/5/2016 by 11:59pm

Point Totals: 100 Points

### Summary

Create a WPF application that has a form that adds items to a XML Document.

Create a Web Forms application that allows for uploading of the XML Document and displays the content in a nice way.

### App Detailed Specs:

- 1) The WPF application must have a form that collects at least 5 pieces of information and adds those 5 pieces information to the XML document. The user must be able to add multiple items to document.

Example (**You can't use this, come up with your own**): User inputs a grocery list one item at a time. Every grocery list item contains Item Name, Item Description, Total Items, Brand and Other Details. If they add 5 items, there should be a Name, Item Description, Total Items, Brand and Other Details for each.

- 2) The Web Forms application should take the XML document and be able to upload into the web application and show the content in a nice way.

### Deliverable

Submit a zip file on D2L using this naming convention: Proj6-Smithz.zip, where Smith is your last name. The zip file should include one solution with the two projects.

### Grading Breakdown

- WPF Application : 20%
- Web Forms Application: 20%
- Creativity: 20%
- XML Document Design: 10%
- Well Written: 10%
- Comments: 10%
- Indentation: 10%
